

DRAFTING AND FEEDBACK FOR D3 SLIDES

AGENDA

- 
- 01 Drafting slide contents
 - 02 Putting content in the slides
 - 03 Drafting talking points
 - 04 Practice and Iteration
 - 05 Peer Review
 - 06 Linking to Next Weeks

section 1

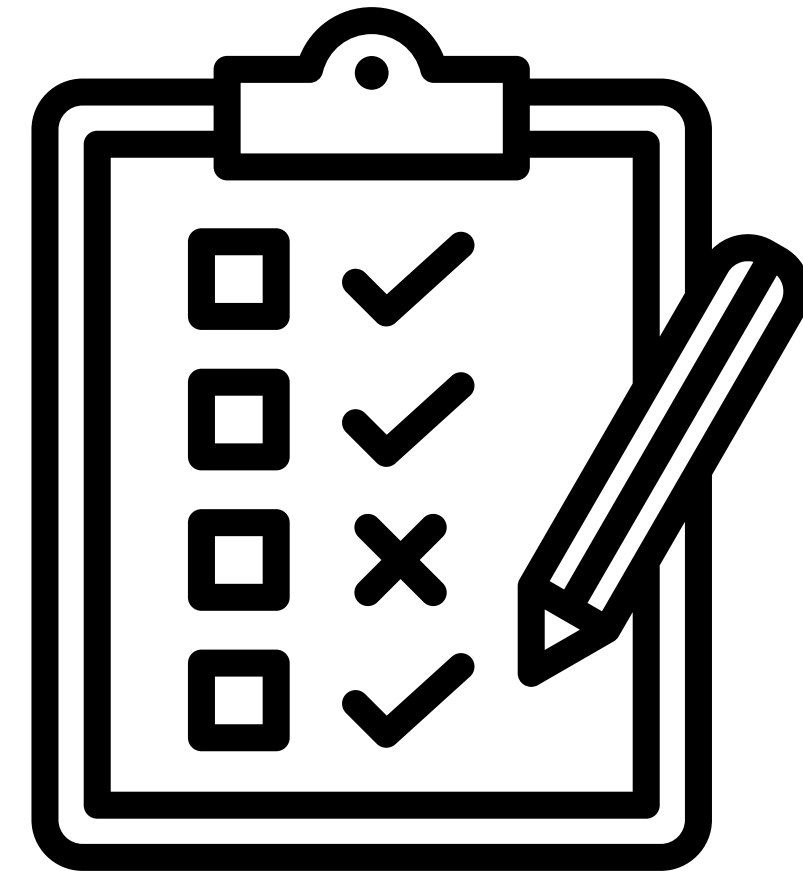

DRAFTING SLIDE CONTENT

1.1. Identifying where to find content

Given your D2 submission and given resources, you can identify where to find the contents of your slides.

Activity

- Refer to the next slide for mapping your previous submissions and resources to find the content.

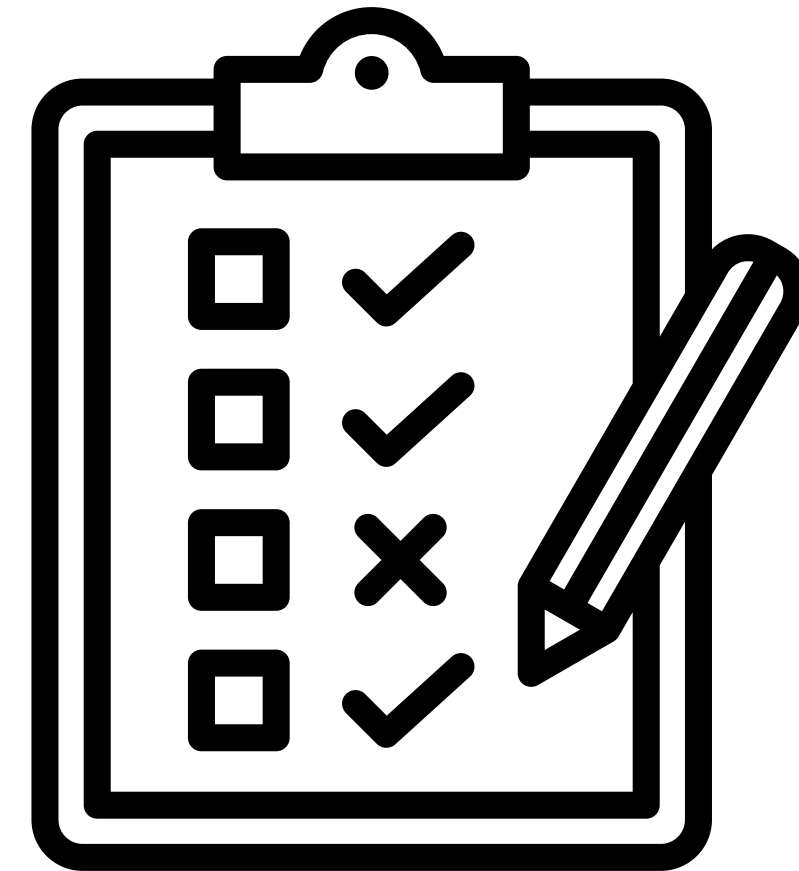

<u>Section</u>	<u>Where to find its content in <u>your</u> previous submissions and resources?</u>
Problem	Your chosen case study brief + your own research
Solution	Your functional and non-functional requirements
Value Proposition	Your functional and non-functional requirements
Market	Use case diagram + target users from case study brief
Traction	Your own research (example given in the lecture slides)
Competition	Your own research (example given in the lecture slides)
Cost/Revenue	Your own research (example given in the lecture slides)

1.2. Drafting slide content

Given the table in the previous slide, you can start filling it in with the content relevant to your solution.

Activity

- Write the content in short form so that it becomes the speaking notes for your presentation.
- **You can make improvements to your solution after D2, but not overhaul the whole solution.**

1.3. Peer review

Since each member of the group will cover different section(s), it is important to ensure there is consistency between the sections.

Activity

- For your drafted content, discuss with your peers and tutor:
 - Are there any inconsistencies? For example, does one section imply the solution is scalable while the other section implies it is limited to one domain.

section 2

PUTTING CONTENT ON SLIDES

2.1. Putting content on slides

Given the content, your pitch slide deck can now be made using tips from the lecture slides.

Activity

- Refer to lecture slides for tips on the structure of the presentation.
- **Make use of low-fi/high-fi MVPs for higher marks (refer to earlier week resources).**
- Do not overload the slides. They should have pointers for you rather than scripts.
- **Put the presenter's name on the slides they are presenting (for marking purposes).**

2.2. Peer review

Even though many people are talking and preparing the presentation, it is important to ensure there is consistency between the sections.

Activity

- For your drafted content, discuss with your peers and tutor:
- Are there any inconsistencies? For example, does one section have different colours from the others? Is one slide having too much text compared to others?

section 3

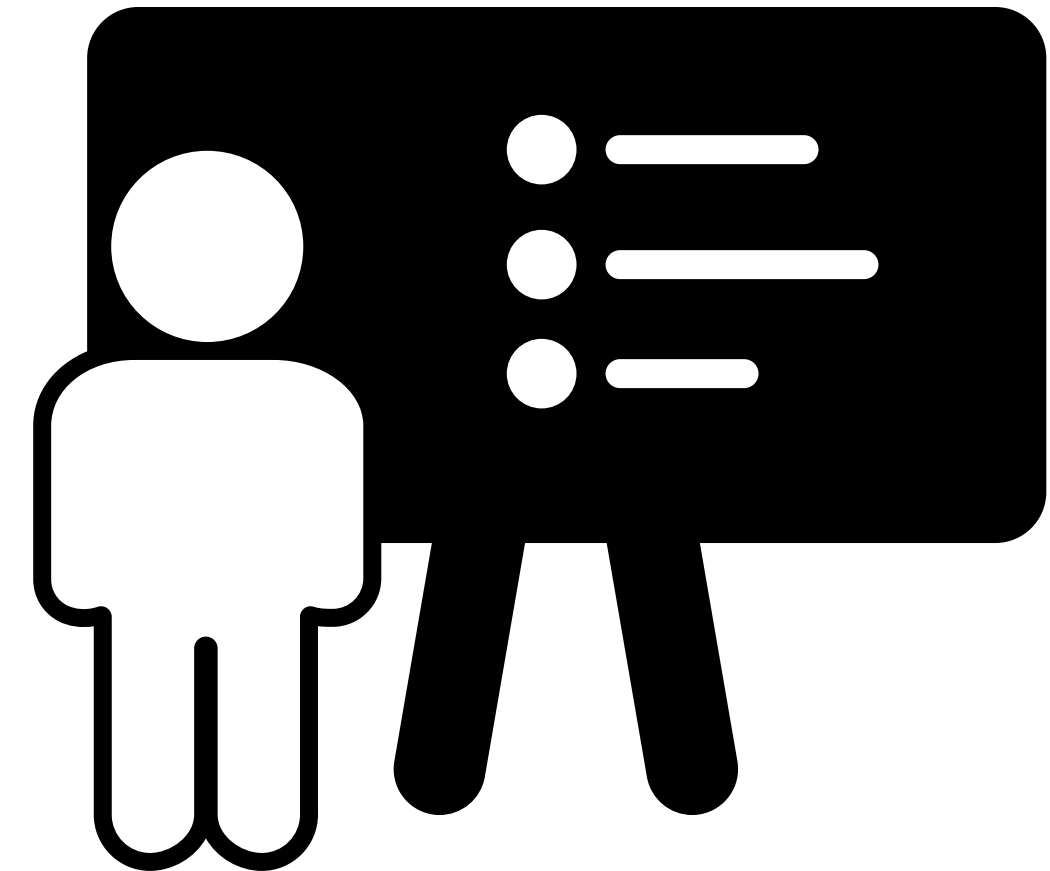

DRAFTING TALKING POINTS

3.1. Drafting talking points

The talking points need to map to the slide contents and build on them rather than read fully from the slides.

Activity

- For the section(s) you are going to present, write your own talking points based on that section of the slide deck.
- **Keep the talking points in a shared location. If some team members have emergencies on the day and do not come, someone else will need to step in.**

section 4

PRACTICE AND ITERATION

4.1. Practice and Iteration

Given your talking points, it is important to see that your narrative flows well and that you are comfortable regarding your presentation.

Activity

- Given your talking points, practice them by reading through them audibly so you can hear yourself and see if the points make sense.
- Time yourself to ensure each section is 1-3 minutes, to fit within the overall 10 minutes of all sections.
- **Record yourself and listen back to identify errors in the presentation.**

section 5

PEER REVIEW

5.1. Peer Review

Your section can be perfect, but if it does not flow well with the others it will bring you down as a group.

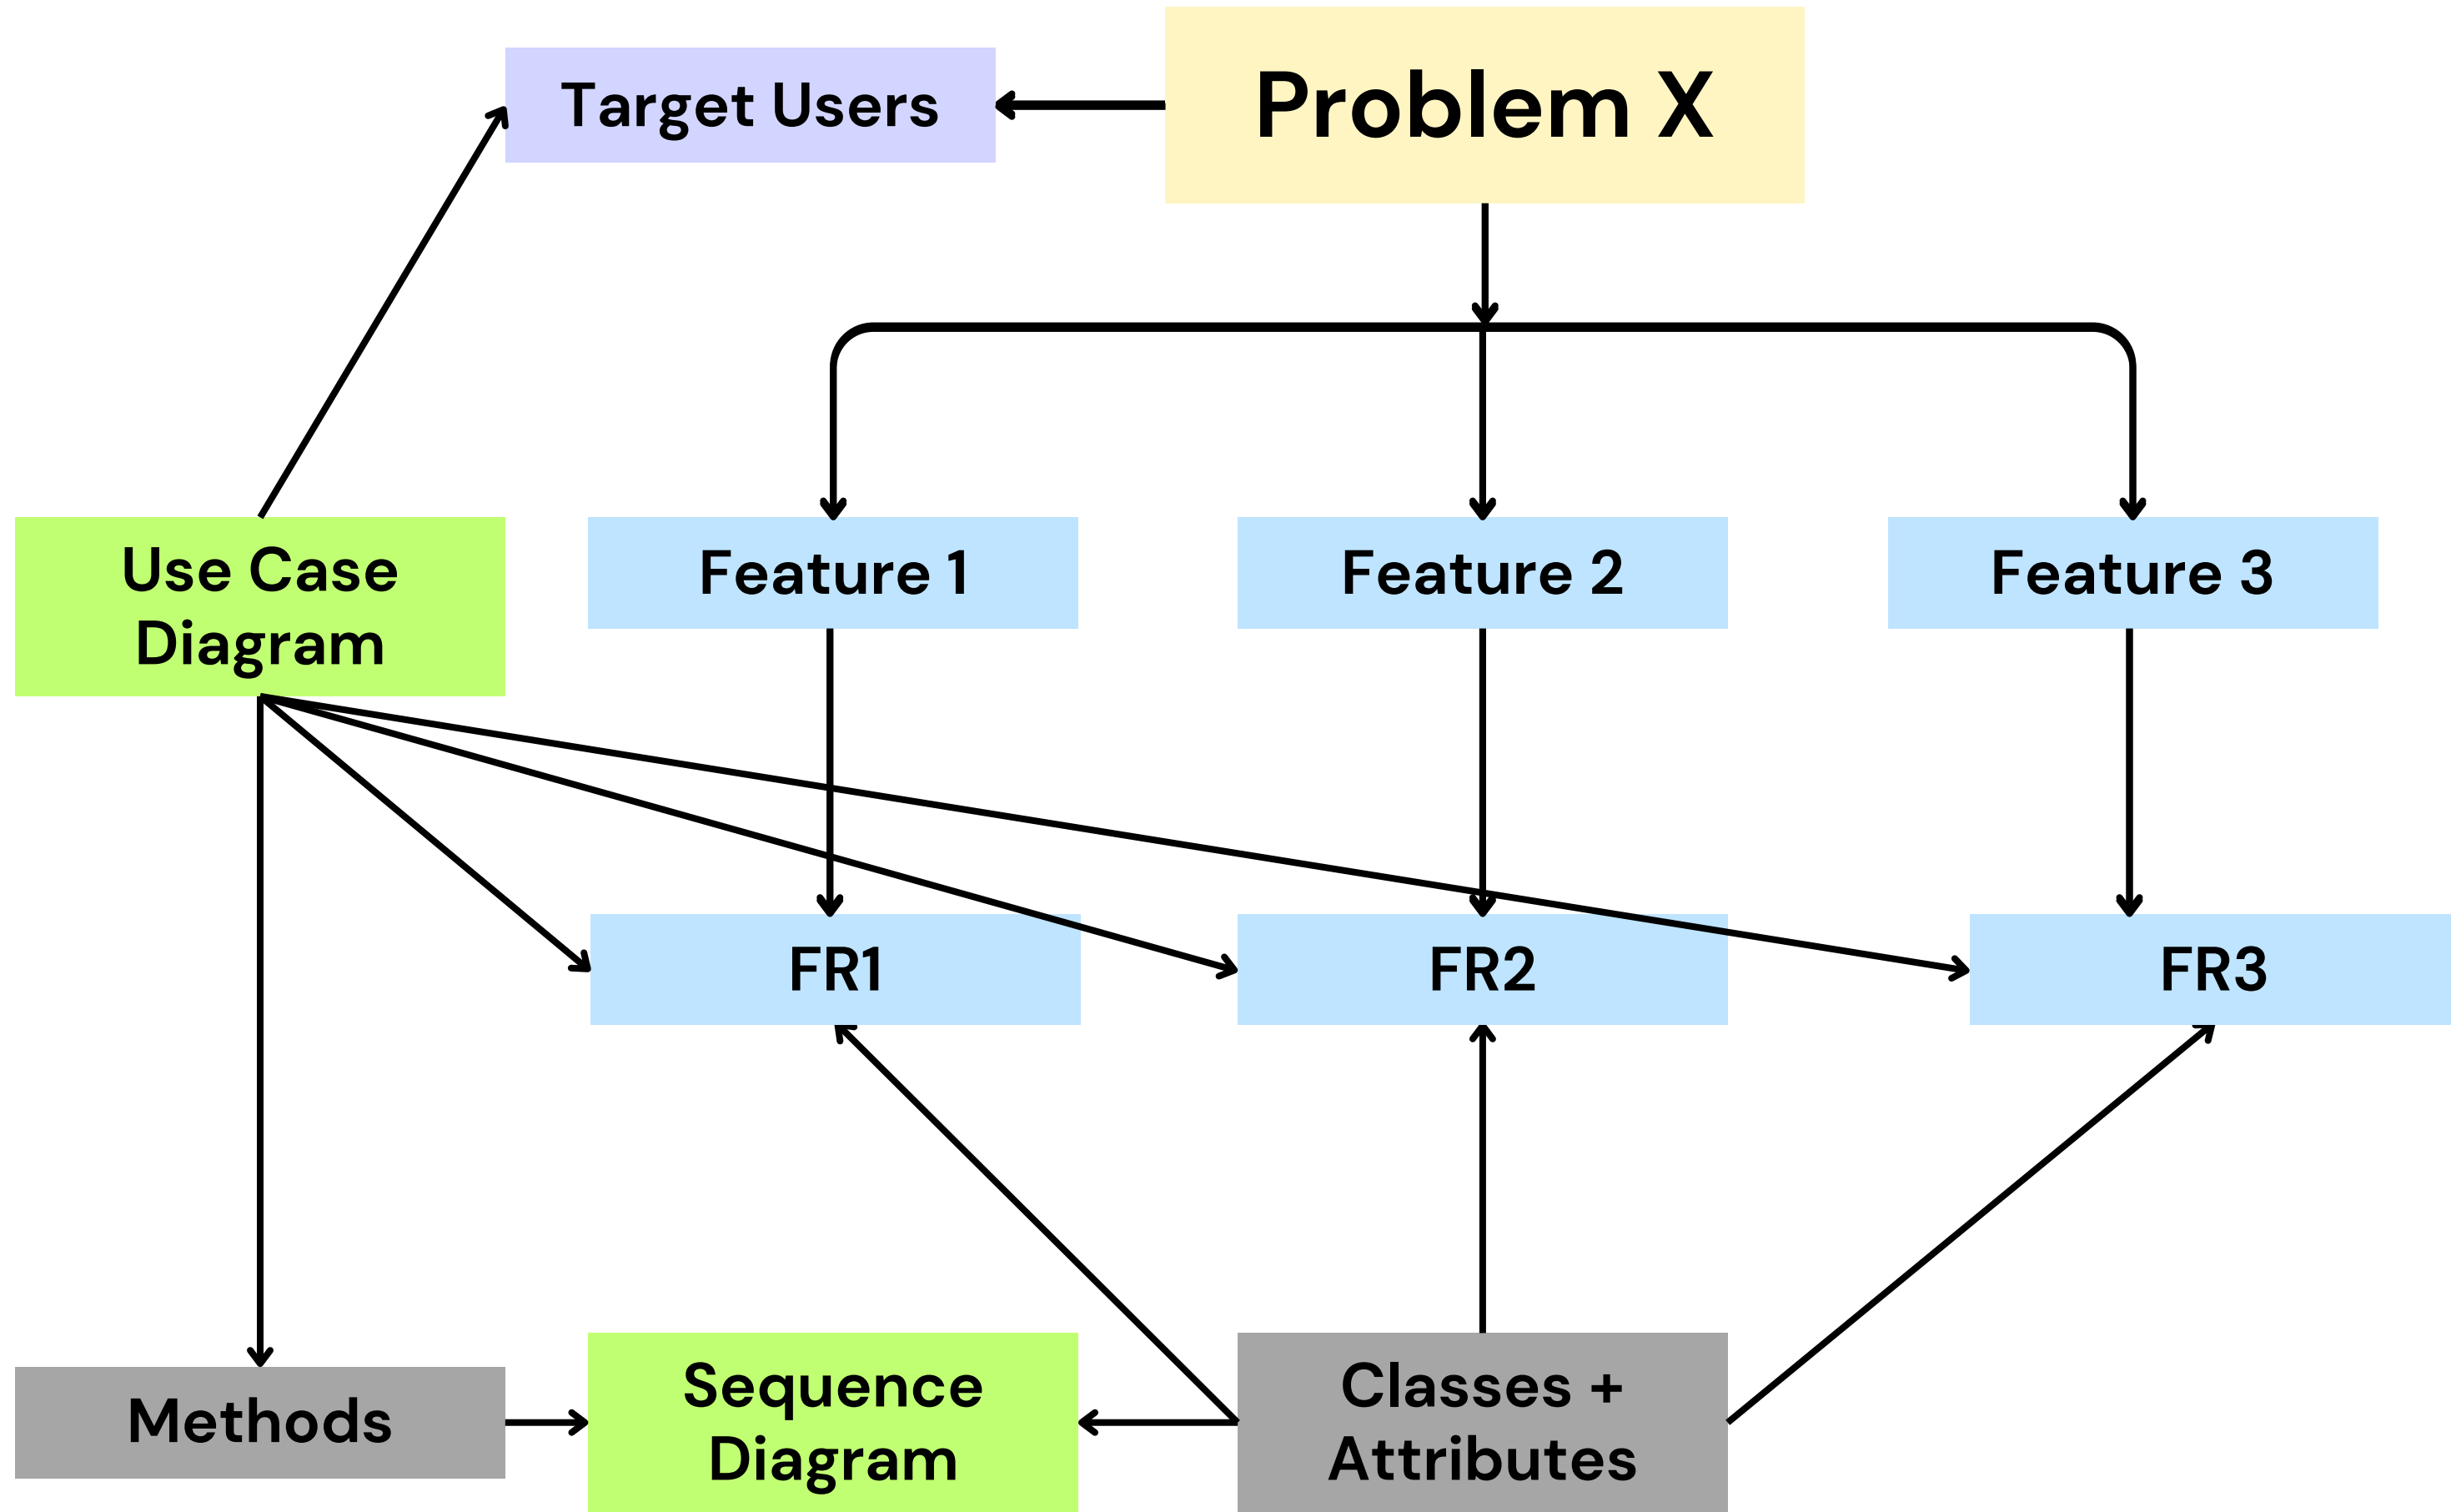

Activity

- With as many group members as possible in your group, run through your whole presentation with each member saying their points and the others providing feedback.
- **Pay attention to the talking points of others. If they have emergencies on the day and do not come, someone else will need to step in.**
- Iterate and refine your slide order/structure if need be for a better narrative.
